# 10 Million Copper Pool

The price of Copper, the Metal, will break suddenly to a very low figure.

This is not a prediction. It is not surmise or manipulation. It is a statement

There are extraordinary, but absolutely legitimate reasons sensational but fundamental reasons for the coming break.

I know them. In time all the world will know them.

There have been accumulated enormous quantities of copper and smelting stocks and enormous quantities of Copper, the Metal, in the hands of stock

When the price of Copper, the Metal, breaks, and for the same basic reason, there will follow a terrific slump in cop-

per and smelting stocks.

This is to give fair warning that I in-

tend to make full use of the knowledge I have to profit by the break at the expense of stock gamblers.

In order that my friends may participate in the profits I foresee in the forthcoming crisis, if they so choose, I will conduct a 10-Million-Dollar Pool for the purpose of selling copper and smelting

stocks short.
For myself and immediate associates, I reserve 6 million dollars.

The remaining 4 million dollars are offered to the public upon the following terms and conditions:

I will accept, in sums of not less than \$25,000 nor more than \$25,000, certified checks to an aggregate amount of said 4 million dollars.

Said 4 million dollars on even terms with said 6 million doll rs will be used by me at my discretion in short saics of not over 500,000 shares of copper and smelting stocks listed in New York, Boston, London, Paris and Berlin.

The net profits (no deductions of any kind to be made but the net commissions paid to Stock Exchange houses who execute orders) of such saics will be divided pro rata amongst participants.

I will make no charge, commission or other, or

Boston, August 28, 1905.

take any profits of any kind from such transactions other than my pro rata share as a participant, and my participation will be based upon my subscription, which will be upon exactly the same basis as all other participants.

The pool shall end on or before January 1st, 1906. I shall not be held responsible by any subscribers or participants for any losses other than those coming from bad faith in my conduct of said pool, for which I agree to be held to a full responsibility. All moneys accepted from said subscribers shall be held by me under a trust agreement embodying the terms and conditions herewith outlined in two national banks and two trust companies of standing in New York and Boston.

I reserve the right to reject any or all subscriptions in whole or in part.

It will be understood and agreed by all participants that I shall have full right and authority to "Pyramid," I.e. use accumulated profits as additional margin for amounts over and above the said 500,000 shares.

Would-be participants must distinctly

Would-be participants must distinctly understand that this pool is purely and simply a speculation and in no-way an simply a speculation and in no-way an investment, and as the stock gamblers at present lined up on the other side of (Copper's) may give me a more strenuous battle than I expect, and as the entire amount of pool subscriptions may be lost, regardless of any break in Copper, the Metal, I emphatically advise against any one participating who is not prepared cheerfully to lose every dollar prepared cheerfully to lose every dollar subscribed in return for the opportunity of gaining the profit, which I anticipate will be 150 to 200 per cent. on the total sum risked.

This warning is notice to all my friends and to all who have advantageously or disadvantageously followed my advice on stocks of my position on copper and on "Coppers.

I exempt Copper Range and one or two other copper stocks, because of peculiar conditions surrounding them, from the coming break.

All subscriptions must be accompanied by certified check made to the order of Thomas W. Lawson, Trustee, and ad-

#### THOMAS W. LAWSON.

to-day until the morning of Saturday, September
16, 1905.

By order of the Board of Managers desire, is caused by a strictly legitimate demand. Local rumor, which is quite circumstantial.

has it that the Kearsarge lode has been located on the land of the old Cliff mine, now owned by the Tamarack. If this proves to be the case mining work will be begun, in all likelihood, at an early date. To the southward the finding of the Kearsarge lode by diamond drilling on the lands of the Tecumseh has resulted in a stock market boom for both the oth of these properties a large amount of done at various times, with results of an almos uniformly worthless nature. At the Tecumseh thousand-foot shafts were sunk on both the Osceola amygdaloid and Calumet conglomrate, with the net result of not finding a cartload of good mill rock. On the Rhode Island work has been under way for six years, and while underground development has been pushed systematically and carefully, nothing of any especial value has been found as yet. Further to the southward is the Franklin Junior mine, and the stock of the Franklin Ompany has benefited by the rich drill core taken from the Tecumseh. Still southward is the Arcadian, but the Kearsarge lode, or what was supposed to be that bed, was located several years at o, and a drill core therefrom was worthless. The lode was located and the boring done under the direction of R. G. Pryor, a competent and careful engineer, and it seems reasonably certain that the Kearsarge bed was located and found value-less by the Arcadian. However, should the Kearsarge be found workable a short distance to the north, a single drill hole would not ondemn the bed on Arcadian lands, and further drilling, or even the sinking of a shaft,

would be advisable. Recent developments at the Winona have been of an encouraging nature.
The Copper Concentrating Company has been organized by T. G. Mays and associates, to build a tailings plant on the Quincy mill sands. The capitalization of the new company is \$50,000, and it is planned to build a plant of about 2,000 tons daily capacity. As the Quincy is making new sands at the rate of nearly 4,000 tons daily, it is evident that the new company will not suffer in the immediate future for any lack of raw ma-

BUTTE, Mon., Aug. 21. -After a few temporary suspensions in several of the Butte mines arty is again producing to the highest point of record. It is stated that the Washoe smelter of the Amalgamated company at Anaconda will again show a record output of copper this month, the total exceeding 15,-000,000 pounds. After a suspension of a month, to permit retimbering of the shaft. the Never Sweat mine of the Anaconda the district, has resumed work. During the time of the shutdown no ore was raised, but a number of men were engaged in opening but a number of men were engaged in opening new ground. All the other mines of the Amalgamated are in operation and are yielding an unusual quantity of ore, exceeding 10,000 tons a day. A big crosscut from the 2,400 foot level of the Anaconda is being extended south and will scor cut several large ore bodies south of the shaft. At the Mountain View mine, one of the Boston and Montana properties, new boilers are being installed for the purpose of providing steam for the new hoisting engine and the work will be completed within another week. The mine is being worked as usual while the improvements are under way.

The shaft of the North Butte company on the Speculator claim is being retimbered from top to bottom and other repair and improvement work is being done, which will be concluded in about two months. In the meantime the North Butte is producing its usual quantity of ore, which is being hoisted through the shaft of the High Ore,

The mines of the United Copper Company are all in operation, with the exception of those shut down by Amalgamated injunctions, but the limit of their producing capacity has not nearly been reached. The Rarus, Corra, Minnie Healey and Johnstown are all producing big quantities of ore and shipments are also being made regularly from the Belmont and Lexington. The company is also buying all custom ore available.

The Amalgamated Copper Company is producing at present at a rate in excess of 275,000,000 pounds of copper a year, and other companies show a correspondingly heavy output.

producing at present at a rate in excess of 275,000,000 pounds of copper a year, and other companies show a correspondingly heavy output.

BISBEE, Aug. 21.—In the 900 foot drift on Junction Mine, which was a week ago just getting into ore, the Miners are now thirty feet in the cast drift, running through ore averaging better than 10 per cent. all the way. The full width of breast is ore and the prospects are for a large body at that point. This is on Calumet and Pittsburg ground, and is flattering for that mine and Junction. It is really the first ore that has ever been cut in Calumet and Pittsburg other than by diamond drilling, and comes after the company has spent about \$1,850,000 in purchase and development of its ground. The management of the company announces that work toward the development of the ore bodies known to exist in the mine will be prosecuted with great vigor, and the general opinion is that it should not be later than Jan. I when the Briggs shaft will be completed and drifts from it make into ore, and that this mine, as well as the Lake Superior and the Duluth, should make some dividend payments during 1906. These three properties are in excellent financial condition, all have a surplus of considerable size and Duluth a very large one. In case either should require mohey before making its first earnings it can borrow from Calumet and Arizona. But no such action is anticipated. Calumet and Arizona kas just declared a \$2 quarterly dividend, making \$2,900.000 since December, 1903.

The management of Lake Superior and Duluth mines makes the following statement as to the extent of ore bodies opened in these two properties, the reserves so far opened are enough to maintain daily shipments of 130 tons from each mine for a period sufficiently long to be considered permanent, while the aggressive exploitation that will be kept up may be looked to for the development of radditional ore bodies.

The Helvetia Copper Company shaft is now down more than 800 feet. This old mine for smelter use Crosscutting ARIZONA.

ALASKA.

ore. A smelting plant has been added and the property is now in condition to make large and regular shipments. The mine and smelter being on tidewater makes the handling of ore and matte very cheap.

The stampede to Bearpaw River from Fairbanks continues, about three hundred having left Fairbanks and other camps. The yield is from 2 to 5 per cent, to the pan, and the district is from two to twenty miles wide. Stampeders are taking supplies from Fairbanks. Fairbanks.

wide. Stampeders are taking supplies from Fairbanks.

LAKE REGION IRON MINES.

DULUTH, Minn., Aug. 24.—The opening of new mines continues on the Mesaba Range. M. A. Hanna & Co. have just opened a small steam shovel property on the western range to ship over the Great Northern road, and expect to get out nearly 59,000 tons this year. The ore from this mine, which they have called the Alexandria, is high grade bessemer, and quite hard. The Hobart Iron Company of Cleveland is beginning to open a new mine in section 25-58-17. Mesaba Runge. It will be an underground property and a shaft about 200 feet will be sunk next winter.

The Republic Iron and Steel Company is operating its Pettit mine, which is practically a new property, quite heavily, and expects to get out this year about 200,000, tons. The company has sevaral other Mesaba mines that have probably passed their maximum, notably Franklin, which is said to be pretty well worked out. This mine and the Union, adjoining it, half interest in which is owned by the company, are both idle this year, though there are large stock piles on surface at each. The company's Bessemer shaft is in operation and is shipping from both shait and stockpile. Its Victoria shaft is idle as is its Wills mine. This latter is a small property.

Mines that were flooded out last week have recovered and are shipping heavily again. But the record for the month cannot surpass that of July. One or two strikes have occurred in the past few days at various points, mostly on the Gogebic. There 600 miners went out in a body because some other, men had an advance in pay. On the Mesaba, from which comes the great bulk of ore shipped, there is no sign of disturbance, but dropped it after shipping gout the oie it had mined. The mine has been explered and taken by several of the larger Lake interests, but has not been held very long by ary. It produces an ore that has not been expered and taken by several of the larger Lake interests, but has not been held very long by ary. It produces an ore that ha LAKE REGION IRON MINES.

COLORADO. COLORADO SPRINGS, Aug. 24 .- A good sized streak of bonanza ore has been found in a seven foot vein of \$106 ore in the Gold Sovereign mine at Cripple Creek.

Several sacks of sorted ore from the Dictator mine, near Lawson, showed \$1,436.34 a

guard. The ore carried \$2,000 a ton, or \$100,000 total.

The Hayden lease on the Elkton mine is proving to be bonanza in character. Hayden recently bought it for \$5,000. He expects to realize enough in the first month to pay the price. A. C. Jaquith, the mining engineer who planned and constructed the El Paso drainage tunnel, and who will supervise the construction of the proposed second tunnel, which is to drain the camp at 2,000 feet depth, says work will begin not later than Oct. 18. It is one of the camp's greatest enterprises.

The Sunny Side Bining Company, compand of Pittsburg, Ps., cantalists, based

a big ledge of good ore has been found. The property has been sold to J. Irving Crowell of Lox Angeles, who formed the Bullfrog-Cliff company. The ledge shows for 1,500 feet on the surface and it is four to six feet wide. The ore runs from \$30 to \$700.

News from Rhyolite is to the effect that a very rich strike has been made in the Hobo claim of the Eclipse-Bullfrog company. A body of ore between five and six feet in width has been encountered at a depth of seventy feet. Tests across the entire width of the shoot give values from \$400 to \$900 a ton. The entire mass of the vein matter will run close to these figures. CALIFORNIA.

will run close to these figures.

CALIFORNIA.

SAN FRANCISCO. Aug. 21.—Preparations are being made for extensive development work at the old Alaska mine at Park City. Sierra county. A shaft will be sunk to a denth of a thousand feet.

Some very rich rock has been struck at Fourth Crossing, Calaveras county. Twenty pounds taken from the 14 foot ledge assayed from \$300. to \$400.

The report of the sale of the famous Plumas Eureka mine has been confirmed. The purchasers are Rhode Island men, Joseph D. Cotton and J. D. Johnston, both of Newport. They propose to form a corporation to do extensive development. The property of the company embraces 2,500 acres of patented land covering one of the richest mineral deposits in the northern part of the State.

The new mining section at Fort Bidwell, in Modoc county, bids fair to become a permanent camp. This section was supposed until a short time ago to be non-mineral. Many prospectors have cone there since it was announced that gold had been found, and all the indications are for important developments.

SALT LAKE, Aug 21.—A new company has been organized in Boston to operate the holdings of the Shawmut Mining Company, at Bingham, consisting of eighty acres and including the Cuba group.

At the California, Park City, the mineral recently found in a natural cave has been so far developed that the management is able to amounce the presence of a twelve foot vein of galena and carbonates between walls. The mill will soon be in operation again.

Utah mine, at Fish Springs, has declared a dividend of one cent a share, or \$1,000. The company is preparing to go down below the water level. Twenty-nine tons marketed last week sold for \$3,340.

The Grand Central of Tintic has gone fifty feet below the 1,300 level in ore that runs as much as \$70 in gold.

fifty feet below the 1,300 level in ore that runs as much as \$70 in gold.

10 AHO.

Boisé, Aug. 20.—Work is progressing on the new mill going up on the I hunderbolt mines at Trapper's Plat, northwest of Thunder Mountain. One tunnel has cut the vein at the depth of 300 feet and the grade of the ore was found to be fully as good as in the upper works, going from \$15 to \$20 a ton in gold.

The Basic company, operating dredges at Centerville, on Grimes Creck, in Boisé Basin, has completed the wagon road from Grimes Pass to South Fork of Payette River, and a large force of men is employed to construct a dam seventy-five feet high for an electric power plant. Four large turbine wheels will be put in and dynamos for generating 1,250 horse power have been ordered. Besides power for use at the dredges, wires will be extended to the different towns of the Basin for lighting purposes, and contracts have been made to furnish power to dredges at Placerville and Idabo City and also to several quartz mills.

In a few days contracts will be let by the State for the construction of the wagon road from this city up Boise River to Arlanta and Black Warrior districts, eighty miles from there. This road will not only hasten development of many great mines, but encourages prospectors owning promising claims along the route to expend more work on them.

STATION AND SINKING MINING PUMPS.
THE SLOGAN OF THE CAMERON...
"CHARACTER THE GRANDEST THING."
Over 40,000 CAMERON pumps in daily attafactory use all over the world give tangible proof
of their merit and confirm the claim for their
superiority over all others. They are conceeded to
be the most durable, reliable and effective mining
pumps on the market to-day, and while often imi
tated are never equalled. For proof, inquire of any
mining engineer: for the latest optains. "C and
prices, write any of our resident agents or dreet
to the

MINE PUMPS.

tor mine, near Lawson, showed \$1,438.34 a ton.

The Blue Bird group of claims, Georgetown, Col., district, has been bonded for \$25,000, and leased to D. W. Stewart of Idaho Springs, who represents New York capitalists.

A large flow of natural gas was struck Friday in the Montrose, Col., tunnel which the Government is building for irrigation purposes. The strike was made at the tunnel level 5,000 feet from the west portal. Large quantities of oir rock are found in the valley near by. Several prospectors will sink wells on adjoining lands.

A carload of ore from the C. K. & N. mine at Cripple Creek was shipped to the Eiler smelter at Pueblo under a strong armed guard. The ore carried \$2,000 a ton, or \$100,000 total. desiring reliable information as to mining properties in that location. Being on the ground, Mr. McClelland can furnish information premptly and at slight cost. His references as to character and ability are Prof. James F. Kemp, Columbia University, M.Y., and Prof. Jno. D. Irving, Lehigh University, Bethlehem, Pa
